Korean Technology

6 STAGES Purification

1

Pre-Filter

Captures the largest particles; enhances the durability and performance of the other filters

2

99.97% True HEPA Filter

Removes up to 99.97% of airborne pollutant particles, such as dust mites, smoke, and other airborne particles which are as small as 0.3 microns

3

Activated Carbon Filter

Traps chemicals, odours, volatile organic compounds (fomaldehyde), viruses and allergens

4

Molecular Sieve Adsorption Layer

Strong absorption ability to block larger particles to increase the lifespan for the activated carbon filter

5

Cold Catalyst Filtration

Oxidises and breaks down compounds and toxic substances, such as benzene, ammonia, TOVC etc

6

Negative ions

Neutralise the air; eliminate airborne allergens and germs.
